2.1 The direct way

Big Centered Text

Here is a paragraph. Notice that the paragraph was indented even though I didn't tell L^AT_EX to indent. This is because indentation is automatic.

Notice that there is a blank line of text between this paragraph and the previous one. Without that blank line, L^AT_EX will not start a new paragraph.

To skip the indentation for a single paragraph, you can use the `\noindent` command. If you wanted to skip indentations for the entire document, you can set the indentation size to zero.

The standard indentation is 15pt. Notice that this is smaller than the 1cm indentation that was created in the preamble. The default size is usually fine and there's usually no reason to change it.

$$f(x) = a_2x^2 + a_1x + a_0 \tag{1}$$

$$= x^2 + 4x - 5 \tag{2}$$

$$f(x) = a_2x^2 + a_1x + a_0$$

$$= x^2 + 4x - 5 \tag{3}$$

$$2x + 1 = 9$$

$$2x = 8$$

$$x = 4$$

$$3y - 2 = -5$$

$$3y = -3$$

$$y = -1$$

$$-5z + 8 = 3$$

$$-5z = -5$$

$$z = -1$$

Notice that by substitution we get the equation $f(x) = x^2 + 4x - 5$. This is the quadratic function in the variable x , and we can identify the vertex by completing the square...

$$\sum_{n=1}^{\infty} \frac{1}{n^2} = \frac{\pi^2}{6}$$

$$\left(\sum_{n=0}^N \left(\frac{1}{a+b}\right)^2\right)^2 \tag{4}$$

$n = ab$ where a and b are natural numbers
